

Heather Vandervecht

Front End Developer

Toronto, Ontario

Avid learner, chronic discussion-haver, and forever optimist. I like to focus on UX and writing code that's maintainable. My hobbies include questioning how to make something better, thinking about space, and eating snacks. I'm also teaching myself French.

WORK EXPERIENCE

FILAMENT CREATIVE INC.

Intermediate Developer | Apr, 2016—Apr, 2017

As the lead developer, my main role has been to engage with clients and to support and mentor the members of my team. I also spearheaded the creation of a development process that improved our workflow and introduced new technologies into our projects. I've built with WordPress, React, and ExpressionEngine on this team, as well as learned the basics of servers.

RESOLUTION INTERACTIVE MEDIA

Front End Developer | Dec, 2014 – Apr, 2016

Predominantly front end work, though I did design several websites and was the back end developer for others where necessary. I worked with WordPress, Drupal, PyroCMS, and Jekyll (with prose.io integrated for content management). I helped improve the company-wide development process and was front end lead on several projects.

REDRHINO INC.

Jr Web Developer | Jul, 2013 – Dec, 2014

My job at RedRhino consisted of creating websites and providing support for existing sites. I worked mostly with WordPress or hardcoded sites, and did both back end and front end. Additionally, a large portion of my time was spent doing production work for designers, and providing feedback to the designers as to best practices when designing for the web.
